Turnkey utility sector VPN solution
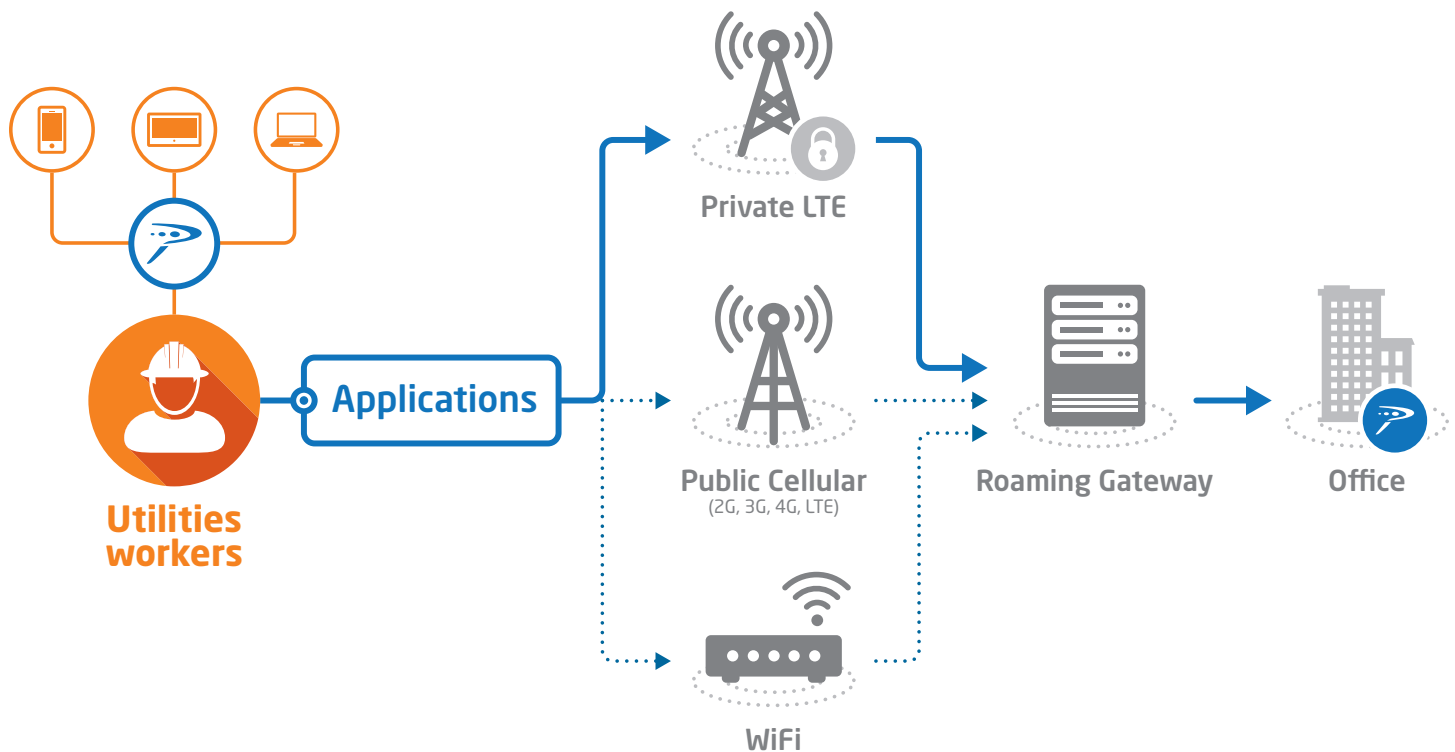

You need flexible mobile networking capabilities for your flexible working environment!

ipUnplugged is the industry's only mobile VPN solution built on open Mobile IP and IPsec standards, enabling **secure connectivity** and **seamless roaming** across any combination of IP networks. ipUnplugged was developed to work perfectly on **Android devices.**

That freedom for your workforce to **roam without any impact** over both corporate and public networks, wired or wireless, will translate into **higher productivity and cost savings.**

Mobile employees will:

- stay productive everywhere for a longer period of time, **increasing efficiencies**
- connect to the Internet, intranet and corporate applications just like they would do at the office

Utilities workers → Applications → Private LTE / Public Cellular (2G, 3G, 4G, LTE) / WiFi → Roaming Gateway → Office

Radio IP — Redefining Secure Mobility — ipUnplugged

HIPAA   FIPS VALIDATED 140-2   CRIMINAL JUSTICE INFORMATION SYSTEM

Protect
your data

Secure guest access

You will be able to control access using the comprehensive Network Access Control (NAC). You could also grant momentary Internet access to visitors, temporary users or consultants, without compromising your corporate LAN security.

Never worry again about security

ipUnplugged secures **the user, the data being transmitted** as well as **the IT infrastructure.**

- **User** – ipUnplugged uses Windows Active Directory and communicates with a RADIUS server to validate passwords using two-factor authentification.

- **Data** – The confidentiality of the data exchanged is guaranteed. ipUnplugged applies the industry's highest FIPS 140-2 encryption standard – AES, 256 bit.

- **Infrastructure** – Corporate security policies are enforced on corporate assets at all times. All wireless communications on corporate devices are routed through the VPN tunnel. An integrated firewall provides even greater security protection of the IT infrastructure.

Improve your system availability and reliability

ipUnplugged offers you redundancy by synchronizing gateways. Should one gateway go down, the system always remains operational. **Trust your system like never before!**

Operating Systems	
Roaming client	Android 4.0 / 5.0 Windows 10 Windows 8.1 (32-64 bit) Windows 7 (32-64 bit) Windows XP SP3 (32 bit)
Roaming server	Windows Server 2012 R2 Windows Server 2008 R2
